

Player needs to fulfil the following conditions before starting game:

1. User must create a username.
2. Username must be 3 or more characters long.

Once conditions are met, player's username is saved and they are directed to the game area.

A question with 4 answer options is randomly generated out of an array of 10 questions.

Answer options have a hover and focus effect.

Player is only allowed to select 1 answer which will get a different coloured background when selected.

Player's username is displayed on top of the question counter.

Player can move freely between questions, using the previous and next buttons, and change selected answers.

The submit button works only when player has answered all questions.

Once quiz is submitted, player is directed to the player score screen.
